SURFACE PREPARATION - GENERAL PRACTICE

For best adhesion, surfaces should be clean, dry, and non-greasy. Remove all mildew, dirt and grease before priming. Allow this primer to thoroughly dry before applying one or two coats of finish paint.

NEW DRYWALL: Fill construction defects with spackling. Prime with this product. Allow to thoroughly dry. Scuff sand with fine sandpaper to remove raised nap before applying finish coat(s).

PLASTER AND MASONRY: Apply only to firm, fully cured and dust free plaster or masonry surfaces. Fill construction defects with spackling. Prime with this product.

NEW WOOD: Repair construction defects and countersink all nails. Prime with this product. When dry, scuff sand with fine sandpaper to remove raised grain. Fill all nail holes, knots, corners, etc., prior to topcoating.

SEALING KNOTS AND STAINS WHICH MAY BLEED THROUGH PAINT FILM: Spot prime knots or stained areas with 3077 ProMax Alkyd Uniblox Universal Primer or 5088 ProMax "Eco-Green" Acrylic Uniblox Bonding Primer and let dry. Then prime entire surface with appropriate primer. Woods subject to tannin bleedthrough (cedar, redwood, etc.) should be primed entirely with 3077 or 5088. If stains show through the primer coat, these areas should be primed again before finishing.
